Slojnice su ekstrapolirane iz mreže točaka svakih 30 m te predstavljaju oblik terena, a ne točne visine. I leće curve di livello vengono estratte da una griglia di punti su ogni 30 m e rappresentano la forma del terreno e non altezze precise. I le schichen werden alle 30 m aus einer Punktgitternetz herabgeleitet und repräsentieren eine Geländeform, nicht eine exakte Höhe. I le curve di altitudine sono estratte da un punto grid e rappresentano soltanto shape e non esatte altezze.
